

Mini Price, Maxi Performance.

Vectron POS Mini is the perfect stand-alone cash register for small businesses - and simultaneously provides power reserves for multi-station and branch solutions. It combines comprehensive cash register functions with minimum footprint and is even available with a touch screen.

Powerful 64 bit technology

Reliability through buffered RAM and USB backup

Compact housing with small footprint and large keyboard

High-quality design with stainless steel applications

Infinitely adjustable 5.7 inch colour display

Optional customer display integrated in the cash register housing

Robust flat keyboard for an easy exchange of labelling

Extensive and extendable connection facilities for peripheral devices

Flexible cross-sector POS software

Prepared for automatic Back Office connections

Integrated time and attendance

The space saver

While needing the space of hardly more than a sheet of A4 paper, Vectron POS Mini provides an infinitely swivelling colour display, a large keyboard with 108 keys and the facility of integrating an optional customer display.

Touch screen option

With the touch screen equipment, screen and keyboard melt into one large input area. The robust flat keyboard used in POS Mini is complemented by variable soft keys in the screen area. The optionally integrated customer display with 2 x 20 characters offers extensive information to the client.

Powerful 64-bit electronics

POS Mini relies on superior 64-bit technology. The increase in speed not only optimizes complex and calculation-intensive processing steps; the consequently employed 64-bit platform also increases the performance of ECR networks.

Numerous interfaces

Ten, optionally fifteen interfaces are available for peripheral devices. Printers, scanners, card terminals, dispensing systems, scales, vending machines, cash drawers, clerk and waiter locks, supplemental keyboards, mice etc. are all supported. Two USB interfaces secure interconnection options to the newest peripherals.

Flexible graphical user interface with intuitive icons

Icons, buttons and display fields allow to adapt the user interface to various branches. Alternating screen pages offer understandable input options for each operating step.

Failsafe, manipulation- and virus-proof

The „Embedded Technology“ used in POS Mini provides decisive advantages. Its hardware-oriented construction allows a particularly efficient use of the components. At the same time, the software guarantees the greatest possible flexibility and is immune to PC viruses. Interference-prone hard drives, unbuffered memory and loud fans do not exist in the POS Mini.

ECR network

POS Mini is designed for use in mixed networks with all Vectron POS systems. Distributed tasks in the cash register network elevate the speed and increase data safety. Network-wide maintenance and configuration facilities stand for efficiency. Based on a 10/100 MBit Ethernet connection, the cash register network uses structures identical to a PC network.

Simple data backup on a USB stick

POS Mini stores your sensitive cash register data in short intervals on a commercial USB stick. If necessary, data can be restored at the touch of a button. Besides the robust construction of the cash register, this provides you with double the security.

Prepared for telecommunications and Back Office connections

Via the optional Vectron Commander communications software, you can control POS Mini from the head office. You can read out turnover, order and working-hours data and transmit new PLUs, prices and cashier authorization to the cash register, worldwide. Via an open interface, Vectron Commander facilitates integration of merchandise management and CRM programs, time and attendance and special back and front office software.

Remote maintenance and troubleshooting per RDT

The facilities for remote maintenance and troubleshooting round out the POS Mini safety package. Problems can be analysed, operating errors and the cause of failures can be discovered and eliminated without any loss of time.
